

Unleash the Power of your digital content.

Cost-competitive Digital Asset Management

We solve the pain of Digital Asset Management (DAM) in a simple and ready to use interface, helping your teams to work smarter

Challenge

Companies need a centralized solution to manage and distribute their digital content: a Digital Asset Management.

However most DAM solutions today are too expensive, leaving enterprises to manage their digital assets in inadequate file-based storage system like SharePoint or Google Drive.

This can lead to messy scenarios, where images used by various teams are scattered in multiple tools. Digital assets are then often exchanged by email, adding complexity in versioning and accessibility.

Solution

WizyVision is a cost competitive DAM and a single source of truth for all your digital assets. It ensures maximum value from your digital assets and 100% brand consistency.

WizyVision is built for teams poised to move away from a simple file storage system but feel a full-fledged DAM solution is too complex at their current scale.

Centralize your digital assets and technical documentations in a cloud-based repository, and make them easily available to your teams and partners.

WizyVision is your gateway to cutting edge AI Enterprise Solutions

WizyML Studio

WizyML Studio is our in-house, no code machine learning studio.

Integrate niche-specific object recognition solutions into your business applications.

Smart Search

Leverage image and text recognition (“augmented vision”) to automatically search through your documentation, without stopping work.
