

Document Finder App for Frontline Work

Technical knowledge available on the go.

Increase productivity of your Frontline Workers by 20%.

Frontline Workers often face challenges accessing technical documentation and company knowledge in the field. WizyVision helps putting documentation at hand, everywhere.

Challenge

Frontline Workers need access to technical documentation and knowledge while on the field.

If available, documentation can be difficult to consult:

- Paper documentation is not updated and a pain to access
- Digital documentation can be unavailable when offline, or hardly readable. Try searching on a mobile screen while wearing gloves or under the sunlight!

There is no easy, off-the-shelf solution to find the right information related to the machine or installation that is just before the worker's eyes.

Solution

WizyVision organizes your frontline documentation in minutes, and makes it easy to access by your workers through the mobile app, in 2 different ways.

1. **Smart Search:** Use the smart search on the WizyVision mobile app to find files of any kind instantly.
2. **Custom Image Recognition:** Use AI to recognize what your workers are taking pictures of, and display relevant documentation automatically in the mobile app.

Your Frontline Workers save time, and don't have to manually search through their documentation.

Enable your Frontline Workers to access the documentation they need, anytime, anywhere, using the WizyVision mobile app.

No code setup

Organize your documentation using tags and labels, and create custom image recognition using our no code ML studio.

Instant documentation

Leveraging image and text recognition ("augmented vision") to automatically search through your documentation, without stopping work.
