

# Proof of work for Frontline Workers

**Automate your proof of work documentation and processes**

Save time by automatically capturing and processing proof-of-work photos and videos

## Challenge

Field services workers perform work which often requires proof-of-work documentation to be shared with customers and partners.

On site, these Frontline Works capture hundreds of photos a day which many times must go through a manual process of copying the photos from their devices to an external photo repository.

Then, once the photos are uploaded to a repository, someone must manually go through and organize the photos by the site and service they are associated with.

This whole process is time consuming for both the Frontline Worker and the admin team.

## Solution

WizyVision enables your Frontline Workers and admin teams to save time and manpower by automating your proof of work documentation and processes.

1. Get photos and videos off your Frontline Worker team's devices automatically, and store them in WizyVision's mobile-first digital repository.
2. Automate the organization of your photos and videos by site or service inside WizyVision, using pre-defined tags, labels and artificial intelligence. All of this without human labor.
3. Share your proof-of-work documentation with partners and customers with custom access roles, or APIs.

**Save time for your Frontline Workers and your admin teams by automating the processing of proof-of-work photos and videos.**

### No code setup

Organize your proof of work documentation using tags and labels, and create custom image recognition using our no code ML studio.

### Process integration

Integrate WizyVision's digital repository inside your business application or processes using our APIs.

### Smart Search

Leveraging image and text recognition ("augmented vision") to automatically search through your documentation, without stopping work.
